Really - given everything else - I can't really blame them for their stance. Sara

With a fairly full plate already, Washington's current posture is to wait to see how ESA interaction plays out in Oregon and Idaho on the aquatic life criteria. Basically, I think they want to be measured about putting resources into adopting our update 304a criteria if others are effectively testing whether they'll need to do something more/different.

I'll confirm, but I think there assuming that'll be separate. Nina's perspective is that Washington is generally too far overdue in responding to our criteria updates. I take this approach as saying she's not hyper impatient, but she wants to see indications of revisions getting underway.

Most of the petition is focused on the need to update the fish consumption rate in the human health criteria. The petition also asks for EPA promulgation of aquatic life criteria. Is WA also working on updating all their aquatic life criteria at the same time they are evaluating the fish consumption rate for their human health criteria?

Nancy/Betsy –

Our understanding from conversation with Nina late last week is that this really is meant to get a clock ticking on the “ultimate” backstop for Washington should their existing processes not stay on track.

Dan, Christine, and Angela:

Please find attached the petition to Administrator McCarthy regarding Washington’s toxic criteria.
